SERVICES & ADD-ONS

Milestone Software

- Design
- Installation
- Configuration
- Management
- Maintenance / Service Agreements

milestone

Milestone Systems produces software to improve business processes by managing and distributing digital video regardless of time or location. Milestone has more than 150,000 customer installations in city surveillance, education, finance, government, healthcare, hospitality, manufacturing, retail and transportation industries.

Axis Camera

- Indoor / Outdoor
- Pan-Tilt-Zoom / 360°
- Infrared / Night Vision
- Thermal Detection
- Wide Angle / Long Distance

AXIS COMMUNICATIONS

Axis Communications develops and sells network cameras for many applications. Axis operates in more than 50 countries and is the global leader in the network camera market.

Access Control

- Keypads
- Badges / Biometrics
- Audit Trail
- Restricted Access
- Savings on Lost Keys and Key Control

ISONAS PURE IP ACCESS CONTROL

OPEN OPTIONS ACCESS TECHNOLOGY

The term access control refers to the practice of limiting access to a property, business or room via an electronic or mechanical device. Monitor security at your building entrances using our access control technologies.

ADD-ONS

BriefCam Technology

BriefCam technology allows users to review video, investigate and identify incidents quickly. BriefCam can condense from up to one hour of video down to one minute of viewing time. This allows the end user to rapidly locate a recorded event in a matter of minutes.

License Plate Recognition

XProtect LPR is license plate recognition software that reads information from vehicles and links it with video. The software has a wide set of application areas, including access control, theft prevention, toll road and border control. Advanced matching logic makes it possible to compare recognized number plates and initiate automated actions, such as opening a gate.

XProtect Smart Wall

XProtect Smart Wall improves response time by giving a complete overview of large surveillance centers. The program supports any number or combination of monitors. It runs on standard servers and helps operators focus on the most critical matters to coordinate response activities, as multiple users can be shown the same view.
